

Agricultural Support

SRPC collects the sensor information such as soil moisture, temperature and humidity, trap sensor, concentration of CO2. It improves efficiency in Greenhouse monitoring and Agricultural Productivity.

Weather Observation

SRPC collects the sensor information such as wind direction, wind speed, temperature and humidity, rainfall. Information can be used for disaster prevention.

Sensor information such as soil moisture, temperature, humidity, soil PH · CO2 can be viewed on the web. The web view provide means for storing Logs, data analysis and graphical presentation of real-time data. At the time of emergency such as temperature is extremely high, the moisture content is low, the animal is caught in a trap, sms/mail notification will be sent out instantly. This will help to reduce the burden of farm work and increase crop productivity.

Information of various sensors can be viewed on web portal. Real-time display, the log data storage, analysis and graphical representation. At the time of emergency such as flooding and landslides detection, system will send out the emergency mail.
